Cal/Mag 2001
Osteo-Support

DESCRIPTION
Cal/Mag 2001 tablets from Douglas Laboratories® provide 750 mg of elemental calcium from a calcium complex, together with significant amounts of magnesium. Other nutrients are also included to assist the body in maintaining healthy bone structure.

FUNCTIONS
The adult human body contains approximately 1,200 g of calcium, about 99% of which is present in the skeleton, and 20-30 g of magnesium with about 60% located in bone. Bone is constantly turning over, a continuous process of formation and resorption. In children and adolescents, the rate of formation of bone mineral predominates over the rate of resorption. In later life, resorption predominates over formation. Therefore, in normal aging, there is a gradual loss of bone. Intestinal calcium absorption ranges from 15 to 75% of ingested calcium. Vitamin D is a key regulatory hormone for calcium and bone metabolism. Adequate vitamin D status is essential for ensuring normal calcium absorption and maintenance of healthy calcium plasma levels. Magnesium absorption is independent of vitamin D status and ranges from 30 to 60% of ingested magnesium. Osteoporosis, a condition of reduced bone mineral density that can increase risk of fractures, affects a large proportion of the elderly in developed countries. Caucasian and Asian women typically have low peak bone densities, and therefore, are at the greatest risk of developing osteoporosis. It is generally accepted that obtaining enough dietary calcium throughout life can significantly decrease the risk of developing osteoporosis. Among other factors, such as regular exercise, gender and race, calcium supplementation during childhood and adolescence appears to be a prerequisite for maintaining adequate bone density later in life. But even elderly osteoporotic patients can benefit significantly from supplementation with dietary calcium.

Cal/Mag 2001 provides beneficial sources of dietary calcium together with other nutrients that assist in the maintenance of healthy bone structure and function. For example, boron affects the composition, structure, and strength of bone. It appears to be necessary for calcium and magnesium absorption, their adequate renal reabsorption, and their incorporation into the bone matrix. Boron is absorbed at about 90% efficiency and is rapidly distributed among the tissues.

INDICATIONS
Cal/Mag 2001 may be a useful dietary supplement for those who wish to increase their intake of calcium, magnesium, and other nutritional factors for maintaining good bone health.

FORMULA (#2001)
Three Tablets Contain:
Calcium.................................................................750 mg
(Citrate/Carbonate/Ascorbate Complex)
Magnesium.........................................................375 mg
(Aspartate/Ascorbate/Oxide Complex)
Vitamin D-3..........................................................75 I.U.
Vitamin C.............................................................150 mg
Boron (Citrate complex).................................3 mg
Glutamic Acid ...................................................120 mg

SUGGESTED USE
Adults take 3 tablets daily or as directed by a healthcare professional.
Cal/Mag 2001
Osteo-Support

SIDE EFFECTS
No adverse side effects have been reported.

STORAGE
Store in a cool, dry place, away from direct light. Keep out of reach of children.
