Opti-DHA™
Enteric-Coated Softgels for Cardiovascular Health

DESCRIPTION
Opti-DHA enteric-coated softgels, provided by Douglas Laboratories, contain a novel ratio of essential omega-3 fatty acids, derived from marine lipid concentrate. Processed by molecular distillation, Opti-DHA is an excellent source of these fatty acids, providing 450 mg of docosahexaenoic acid (DHA) and 150 mg eicosapentaenoic acid (EPA) per serving.

FUNCTIONS
The omega-3 fatty acid EPA is the direct precursor for the anti-inflammatory prostaglandins E1 and E3, whereas DHA is of primary importance for the structural integrity of neuronal membranes. DHA is essential for brain and visual development and is vital throughout pregnancy to support fetal brain growth and formation of the retina and visual cortex. As the most abundant fatty acid in the brain, adequate amounts of DHA are needed throughout infancy and adulthood for ongoing optimal function. Low levels of DHA may adversely influence behavior and mental performance, and have been correlated with changes in disposition, memory loss, and visual and other neurological conditions.

Studies have shown that DHA, along with EPA may play an important role in cardiovascular health. One landmark study, the GISSI-Prevenzione Trial, involved over 11,000 people who had already survived myocardial infarction. This was the first large scale trial that showed supplementation of essential fatty acids significantly lowered the risk of death, and that use of this supplement was safe. The exact reasons for such dramatic benefits with respect to heart disease remains unknown, but may be related in part to the ability of fish oil to reduce support the body’s normal inflammatory processes and cardiac health. Studies indicate that EPA and DHA can act as precursors for the anti-inflammatory prostaglandins E1 and E3, and decrease the formation of pro-inflammatory prostaglandin E2 and thromboxane A2. Scientists have also suggested that omega-3 fatty acids can have a direct cardiac effect on arrhythmogenesis. Omega-3 fatty acids may be able to modify sodium channels by binding to the channel proteins.

Additionally, Opti-DHA is enteric-coated, significantly reducing the “fishy” taste sometimes associated with marine lipid supplements.

INDICATIONS
Opti-DHA may be a useful dietary adjunct for individuals wishing to supplement their diets with the essential fatty acids DHA and EPA.

FORMULA (#98531)
Two Softgels Contain:
- Calories ................................................................. 9
- Calories from Fat .................................................... 9
- Total Fat ................................................................. 1 g
- Vitamin E (as d-alpha tocopherol) ......................... 3 IU
- Marine Lipid Triglycerides ..................................... 1000 mg
yielding:
- DHA (Docosahexaenoic acid) ................................... 450 mg
- EPA (Eicosapentaenoic acid) ................................. 150 mg

SUGGESTED USE
Adults take two softgels daily with meals or as directed by physician.
Opti-DHA™
Enteric-Coated Softgels for Cardiovascular Health

SIDE EFFECTS
No adverse side effects have been reported.

STORAGE
Store in a cool, dry place, away from direct light. Keep out of reach of children.
