

Douglas Laboratories® offers QÜELL® Fish Oil, a suite of ultra-pure supercritical CO₂ extracted omega-3 fish oils that provides a concentrated triglyceride form of EPA and DHA in a fish gelatin capsule. A growing body of scientific evidence supports the triglyceride (or re-esterified triglyceride) form of these fatty acids as exhibiting greater absorption (compared to the ethyl ester form), significantly increasing the index of EPA and DHA in the blood. Supercritical CO₂ extraction technology ensures that omega-3 fatty acids are extracted without high temperatures, oxygen or traditional chemical solvents, yielding oil that is protected from oxidation, microbiological contamination, solvent residues and isomer formation.
