Why Nutrition is Essential for Maintaining Healthy Eyes as we Age

Our eyes are an important organ, but all too often they are taken for granted, allowing us to lose sight of the impact that normal aging, our diet, and the environment can play on our visual function. More than any other tissue in the body, the lens and retina of the eye are continually exposed to free radicals and intense light radiation, including potentially harmful blue light. As a part of normal aging, these factors can contribute to changes in the membrane structure and function of eye cells, ultimately impacting our ability to maintain healthy eyes as we age. Supplementation with specific well-researched nutrients such as those found in Ultra Preventive Vision, Macu-Support and Eye Moisture Support can help to support healthy eye function.†

Douglas Laboratories has developed a suite of ocular formulas in conjunction with Dr. Stuart Richer, one of the leading experts in eye health, to deliver the most up-to-date science in the field. With information continuing to emerge on the role of nutrients in ocular health and the age-related challenges we face such as eye fatigue and damaging blue light, these 3 formulas are designed to help maintain healthy eyes through every stage of life.†

Ultra Preventive® Vision is a comprehensive multivitamin/mineral formula with phytonutrients and carotenoids specially designed to help support a healthy macula, retina, and visual performance for all ages that are affected by excess blue-light exposure and free radical damage.†

Macu-Support™ supplies a well-balanced spectrum of key antioxidants that are important in maintaining normal retina and macula function in the eyes.† As we age, the ability of the macula to function properly can decline. The nutrients found in Macu-Support have been studied for their ability to help maintain and support macular function and health.†

Eye Moisture Support is a unique dietary supplement featuring QÜELL Fish Oil®, organic borage seed oil and astaxanthin, among other nutrients, for healthy production of tears and moisture in the eyes.†
